Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Le titre exact paraît au haut du résumé de chaque rapport.

ABSTRACT

Carder, G.W., and G. Low. 1985. Data from the commercial fishery for Arctic charr, Salvelinus alpinus (Linnaeus), in the Cambridge Bay and Rankin Inlet areas, Northwest Territories, 1983-84. Can. Data Rep. Fish. Aquat. Sci. 519: v + 26 p.

Biological samples from commercially caught Arctic charr were collected at the processing plants in Cambridge Bay and Rankin Inlet during 1983 and 1984. These anadromous Arctic charr were caught at the Halovik, Paliryauk, Ekalluk, Lauchlan, Ellice and Jayco rivers in the Cambridge Bay area and at Ferguson River and Rankin Inlet in the Rankin Inlet area. Production figures, age, length and dressed weight data are presented.

Key words: catch composition; catch statistics; commercial fishing; exploitation; fishery management; monitoring.

RESUME

Carder, G.W., and G. Low. 1985. Data from the commercial fishery for Arctic charr, Salvelinus alpinus (Linnaeus), in the Cambridge Bay and Rankin Inlet areas, Northwest Territories, 1983-84. Can. Data Rep. Fish. Aquat. Sci. 519: v + 26 p.

Aux usines de traitement de pêche commerciale, à Cambridge Bay et à Rankin Inlet, on a recueilli, au cours des années 1983 et 1984, des échantillons biologiques d'omble chevalier. Ces poissons anadromes provenaient des rivières Halovik, Paliryauk, Ekalluk, Lauchlan, Ellice et Jayco - toutes des rivières de la région de Cambridge Bay - et de la rivière Ferguson et de Rankin Inlet - dans la région de Rankin Inlet. L'étude de ces poissons porte sur la production, l'âge, la longueur et le poids.

Mots-clés: composition des prises; statistiques sur la prise; pêche commerciale; exploitation; gestion de pêcherie; contrôle.

INTRODUCTION

The Department of Fisheries and Oceans (DFO) has monitored the commercial fishery at Cambridge Bay, Northwest Territories since 1971 (Kristofferson and Carder 1980; Carder 1981; Carder 1983) and Rankin Inlet, Northwest Territories since 1972 (Carder and Peet 1983; Carder 1983). Information collected from biological samples taken has been used to assess the status of the catchable portion of various exploited anadromous Arctic charr stocks. Data obtained from 1983 and 1984 are presented in this report. Quotas and production figures from various fishing areas in the Cambridge Bay and the Keewatin areas are presented as well.

MATERIALS AND METHODS

THE FISHERIES

The early history of the Cambridge Bay commercial fishery is described by Barlissen and Webber (1973) and of the Rankin Inlet commercial fishery by Carder and Peet (1983). Recent data and a description of the Cambridge Bay area can be found in Kristofferson and Carder (1980), Carder (1981) and Carder (1983).

Arctic charr are caught primarily by gill-net with mesh sizes varying from 139 mm to 159 mm stretched measure. In 1983 during the upstream migration Jayco River was fished using an experimental fish wier (saputit) (Carder 1981).

SAMPLING PROGRAM

In 1983 and 1984 data were collected on Arctic charr taken from various rivers during the Cambridge Bay commercial fishery (Fig. 1). Sampling methods followed Kristofferson and Carder (1980) and Carder and Peet (1983). Biological samples were obtained during downstream and upstream migrations of Arctic charr at the following Cambridge Bay area rivers:

River	1983 Samples	1984 Samples
Ekalluk	upstream only	upstream only
Halovik	downstream only	downstream only
Paliryuak	downstream and upstream	downstream and upstream
Lauchlan	upstream only	downstream and upstream
Ellice	upstream only	upstream only
Jayco	downstream and upstream	downstream and upstream

Downstream fisheries take place during July when the charr are moving out of fresh water into the sea to feed. Upstream fisheries take place from about mid-August to early September when the charr are returning to freshwater to overwinter.

Fishing locations along the Keewatin coast are shown in Fig. 2. Churchill, Manitoba is to the south of the area covered by the map. During 1983 and 1984 samples were taken in the immediate vicinity of the community of Rankin Inlet during the upstream migration in August. Samples were taken from the Ferguson River upstream migration in 1983. Samples were not obtained from the other fisheries.

Quotas and production figures are shown in Table 1. Biological data are presented in Tables 2-40. All length tables indicate the lower boundary of the length interval (e.g. 450 indicates length interval 450-499 mm).

ACKNOWLEDGMENTS

The authors wish to thank the commercial fishermen of the Cambridge Bay and Rankin Inlet areas, and the staff of the Ikaluktuit Co-operative Ltd., Cambridge Bay and the Issatik processing plant, Rankin Inlet for their assistance and co-operation.

Summer field assistance at Cambridge Bay was provided by L. Cherniak, K. Fisher, W. Pleunis, and L. LaRocque. Assistance in Rankin Inlet was provided by W. Ferguson and staff, DFO Rankin Inlet, during 1983 and 1984.

A.H. Kristofferson provided scientific advice and reviewed the final draft of this report. Drafting was done by graphic services. Word processing and typing services were done by L. Fletcher and B. Cohen. As well, the authors wish to thank the DFO staff at Yellowknife and Hay River for their help.
